Hello Elite Club Members! Title Toolbox and Corefact have done some integration which will make it a whole lot easier for your clients to take the data/farm from Corefact and move it into Title Toolbox. Here is the process below.

Using Title Tool Box (TTB) to bring farms that reside in Corefact into TTB so that the client can run a variety of searches such as next seller, empty nester, out of state owners, non owner occupied.

Follow these steps in TTB:

1. Click the cloud icon

2. Input your Corefact login credentials

3. Select “Download” from the select action drop down and then select the farm from Corefact you want to import to TTB.

4. Click submit

5. In TTB under the Farming drop down, scroll down and select “Saved Farms”.

6. In the saved farms list the new farm will not appear until the refresh button is clicked

7. The farm from Corefact is now in TTB.
